

The Guardian™

Endpoint Installation Systems

Deployment Simplified Performance Maximize

Patent Pending

- Keeps Transmitters high and dry
- Improves long life performance
- Minimizes inflow contaminates
- Reduces field maintenance
- Easiest of any installation
- No drilling or mounting required

Specifications:

Guardians are thermoformed trays to encompass AMR radios and engineered to fit snugly between the existing lid and meter box frame. A self-sealing gasket is applied to eliminate most, if not all of the inflow contaminates which can eventually interfere with RF broadcasts. A Custom molding processes allows for the [ERTs] to be positioned and mounted as specified by the utility.

Material:

Body/ Tray

The body/ Tray is vacuum formed from ABS, Styrene, PVC or Polycarbonate depending upon the utility's demands. Ribs will be incorporated into the mold to add rigidity and strength to the final part. Final parts are machine stamped to fit unique specifications as described by each utility to conform to meter box frame options

Gasket:

Gasket is supplied in EPDM rubber or Nitrile Buna-N Sponge rubber as described by the utility. The gasket is positioned to meet both the meter box frame and bottom of the lid - sandwiching the mounting trays in between
