**Pricing Plan Details**

**Plan A: Hardware as a Service**

For those utilities that don't want to pay anything up-front, zero monthly fees, and want only to pay when they use the valve. Plan A works best where utilities already charge a fee for disconnect/reconnect, and are comfortable passing a portion of this fee on to SET as part of the HaaS service model. Utilities using Plan A save the operational costs of rolling a truck to disconnect/reconnect service, and therefore Plan A can potentially be a net-zero cost to the utility to use the SETflow valve technology.

**Plan B: Subscription Service**

For those utilities that don't want to pay anything up-front, no per-turn fees, and are comfortable with a minimum monthly fee and a 10-year term commitment. SET is fully responsible for managing your valves and your utility has full access to the SETflow platform for the life of the valve. If at any time during the contract term your utility wants to cancel its commitment, simply pay the retail cost of the valve and continue using the SETflow valve software for the life of the valve.

**Plan C: Retail Price**

For those utilities that prefer to pay up-front and to have no contract commitments, or per-turn fees. Plan C is a traditional purchase model and is available for all valve types and configurations. As part of the Plan C purchase price all utilities will be given access to the SETflow portal for 10 years at no additional cost.

\* Year 1 \$120 min fee; 2-10 \$60 min fee per year  
Each valve turn fee is applied to the minimum fee
